

# FLEET MANAGER

Company fleet management software

Designed by  
<peritus>

# The problem

Does the administration of the company fleet take too much time away from activities that are truly profitable for your business?

Do you often run into mistakes and communication problems in the fleet management flow?

Do you find it difficult to guarantee those routine maintenance activities that save time, problems and money in the long run?

You are not alone.

Managing a company fleet is a very complex activity. Ensuring constant supervision of multiple aspects is complex, especially if you have a large vehicle fleet.

# The solution

How much easier would it be if all the information relating to fleet management, from vehicle requests, schedules, authorization, assignment, collection, up to the eventual sending to the workshop, were entered in an **integrated system**?

Think about the **safety** of having the complete vehicle registration information always just a click away, of having immediate visual feedback on information and deadlines relating to insurance, stamps, coupons, etc ...

Think about the **convenience** of being able to load customized fields into the system for the creation of car data, of being able to independently create users and profiles to which you can assign the functions you want from time to time.

Think about the **immediacy** of viewing the history of schedules and restorations of each vehicle, as well as the calendar of models available on the graphic timeline that can be filtered by period, event and car model.

All this (and more) can be achieved by **digitizing your workflow**.

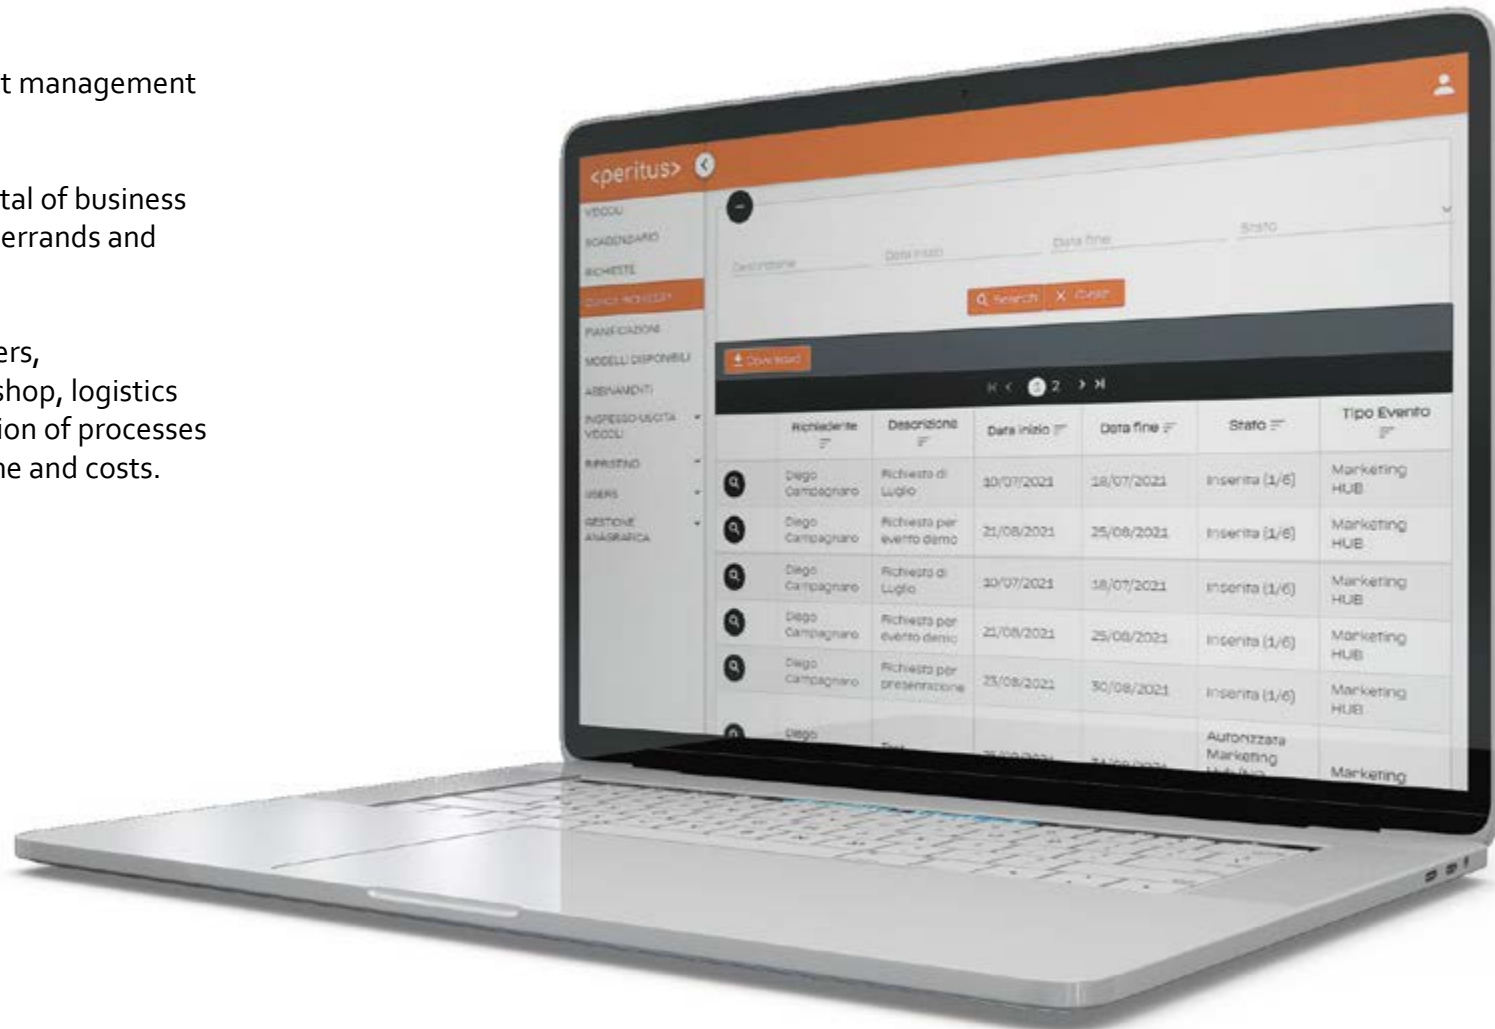

# The software

**Fleet Manager** is a company fleet management software.

It is designed to optimize the rental of business vehicles to employees for travel, errands and various kinds of events.

The coordination of fleet managers, administration, purchases, workshop, logistics and employees and the automation of processes result in significant savings of time and costs.

# Features

## VEHICLE REGISTRY

Customizable fields related to usage status, vehicle status, registration, option list and much more.

## DOCUMENTATION

License plate, insurance, road tax, coupon, notes and much more in constant communication with the schedule.

## REQUESTS

Beginning of the authorization flow and setting of technical times for booking and logistics. Differences between: stationary / road / track usage. Authorization steps of approval with push notification. Notes: editable for communications archive.

## PLANNING

All information on the requests and exits of each vehicle returned in an intuitive graphic timeline that can be filtered by time period.

## AVAILABLE MODELS

Intuitive and immediate timeline of the availability of car models over time. Sort of "virtual garage" filterable by period of time.

## RESTORATIONS

Faults reporting and shipment for repair. Maintenance of the history of entries / exits in the vehicle workshop.

## DEADLINES

Deadlines list in order of urgency, filterable by time and type of document. Possible upload of useful attachments (receipts, insurance documents etc ...)

## REPORTING

Export of feedback reports on the actual operation of the fleet. Immediate graphic display on dashboard.

# The authorization flow

# Advantages

## FLEXIBILITY

**Fleet Manager** guarantees maximum freedom and flexibility of management to the user. The status steps of the approval flow can be customized on the customer's nomenclature and workflow. The modular and scalable system allows each company to configure the most suitable solution for their organization.

## CONTROL

With **Fleet Manager** the fleet is always under control. Real-time updates, historical storage of information relating to the media, detailed analytics always available.

## COORDINATION

Involvement and coordination of all those who take part in the management, logistical and administrative processes of the fleet.

## ACCESSIBILITY

Access from pc, smartphone or tablet whenever and wherever you want.
