

FLEET MANAGER

Enterprise Fleet Management Software

WHY FLEET MANAGER

DATA INTEGRATION

All fleet management data is centralized within the system, ensuring complete, real-time control.

REAL-TIME RESPONSIVENESS

View the scheduling and maintenance history for each vehicle, and check model availability via an intuitive graphical timeline.

ANALYTICS

Export comprehensive fleet performance reports. Tabular and graphical data visualizations are readily accessible on the dashboard at all times.

REAL-TIME TRACKING

GPS tracking and vehicle model filtering to respond quickly to urgent requests.

AUTOMATED ALERTS

Automated email notifications in the event of data loss or connection drops.

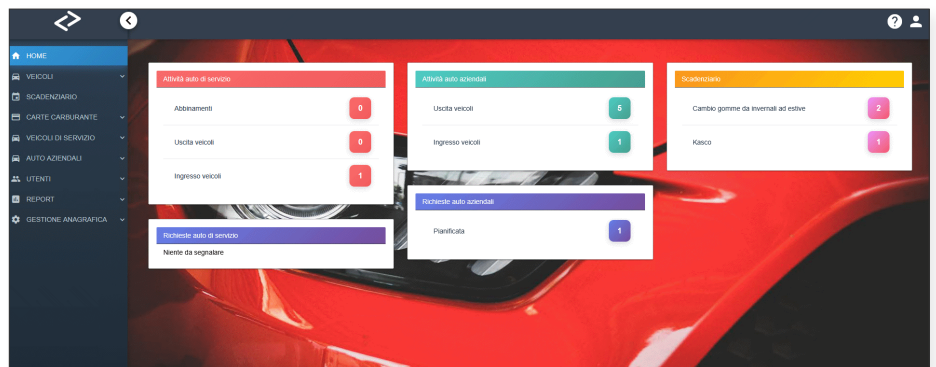

USER PROFILING

Role-based access and features tailored to each user profile.

Fleet Manager is a digital solution that centralizes all data for medium-to-large corporate fleets into a single, secure hub.

The software features real-time vehicle tracking and comprehensive monitoring of deadlines, revenues, operational expenses, fuel and maintenance costs, mileage, and more. Additionally, Fleet Manager streamlines travel planning for executives, employees, and external partners, while simplifying document import/export for full fleet and company car management.

Fleet Manager is fully customizable to seamlessly align with your specific business workflows

Fleet Manager Dashboard

FLEET MANAGER BY THE NUMBERS*

-30% CO2 EMISSIONS

+40% VEHICLE UTILIZATION OPTIMIZATION

-12% DAMAGE & REPAIR MANAGEMENT

+1 MLN TRAFFIC FINE MANAGEMENT

-13 HOURS/DAY SAVED ON INTERNAL FLEET EMAILS

*Data aggregated from Fleet Manager software deployed across three major client automotive companies

APPROVAL WORKFLOW

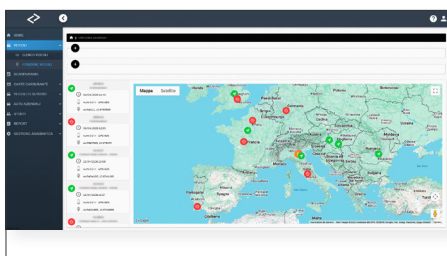

Requests: a centralized view of vehicle requests submitted by employees and contractors. Information can be filtered by request type, date range, and request status. This is where vehicle fleet allocations and returns are planned and managed.

Scheduling: a virtual garage providing a complete overview of scheduled, active, and completed vehicle requests, with vehicles identified by model and VIN. Any maintenance or repair activities carried out by the workshop are also displayed. Data can be filtered by model, license plate, VIN, request, and requester name.

Workshop Activities: a list of vehicle check-ins and check-outs for maintenance, damage repairs, and restoration work. The table can be filtered by vehicle model, license plate and VIN.

INTEGRATED GPS

Fleet Manager includes an integrated GPS tracking system that provides full visibility into vehicle location data, real-time alerts for breakdowns and accidents, identification of the parties involved, driving behavior insights, and more.

A range of advanced GPS-enabled features allows companies to maintain complete control over their fleet, supporting a more strategic, efficient, and data-driven approach to vehicle management.
